t is a vine plant, similar to <u>cucumber</u> and <u>squash</u>, though unlike those it is perennial. It is a

dioecious (male and female plants) vine (creeper) plant with heart-shaped leaves (cordate) and is grown on a trellis. The fruits are green with white or no stripes. Size can vary from small and round to thick and long — 2 to 6 inches (5 to 15 cm). It thrives well under a hot to moderately warm and humid climate. The plant remains dormant during the winter season and prefers a fertile, well-drained sandy loam soil due to its susceptibility to water-logging.

It is used as ingredients of \underline{soup} , \underline{stew} , \underline{curry} , \underline{sweet} , or eaten fried and as \underline{dorma} with \underline{roe} or \underline{meat} stuffing.
